

# Drainac® Results - Recycle

## Recycled Containerboard Manufacturer Achieves Significant Improvement with Drainac®

A major USA recycled Containerboard (linerboard, corrugated medium) Manufacturer was able to reduce overall freeness variability in excess of 60% relative to performance prior to installation of the Drainac® automatic online freeness analyzer.

PM operators were able to utilize the Drainac® online freeness measurement to upgrade their specific energy HPT/D control to closed-loop automatic freeness control mode.

Online freeness measurement allowed operators to anticipate process problems and initiate corrections before the problems impact paper machine performance.

### Customer Benefits

- 60% Reduction in Freeness Variability
- Improved Process Visibility
- Improved MD Basis Weight Variation
- Automatic Refiner Control

# Application Details

## Grades:

Linerboard  
Corrugating Medium

## Furnish:

Recycle

## Location:

Post Refiner, Base Ply  
Post Refiner, Top Ply
